**'LOCATE', a GPS solution will help RRB Energy to monitor the movement of its freight across India**

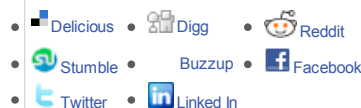

Atlanta-based Symbioun Technologies will provide asset tracking solutions 'LOCATE' to RRB Energy that engages in the field of wind power generation in India. This GPS solution will help RRB Energy monitor the movement of its freight across the country.

RRB is expected to use Symbioun's GPS application "LOCATE" to track their third party logistics providers. All the parts of the windmill are sent as Package knock Down (PKD) route so protection & tracking of the assets is critical as every constituent plays a key role in the end commissioning of the windmill. As their customers are spread across India, on time delivery at the customers' site is essential to ensure customer delight and quicker realization of the payment for RRB Energy.

Reportedly, Symbioun's work in tracking movement through geo-positioning, coupled with end-to-end solution for specific markets, will provide a significant ROI and advantage to RRB Energy, said Shanker Janakiraman, chief executive officer of Symbioun Solutions.

Symbioun Technologies is a software development and services company with global development centers in India. Offerings from Symbioun include web application development, application management, mobile applications, vertical solutions and security services.
